# Technicalinformation

## DairyPlan (DPView): Installing the Acapela-Version 10 under Windows 10

### Description

An Acapela installation under Windows 10 is one successful if certain specific installation steps are started with the option "Run as Administrator"!

> **Please note**
> The program must be installed and activated on all the computers (master and client PCs) where speech output is used.

### Installing the program  (Acapela 10)

Acapela must be installed under Windows 10 as follows:

1. Create the directory: C:\Acapela_Dairyplan

2. Copy all the folders and files from the installation CD to directory.

> **Please note**
> The subdirectory "C:\Acapela_Dairyplan\Data" contains the folders for all the available languages. (~12 GB)
> To save memory space, only the necessary language folders need be copied.

3. Change on the master PC to the following folder:: C:\Dairyplan

> **Please note**
> On a network installation with client PCs, the DairyPlan directory connected over the network must be changed.

4. Start the program "as administrator": TTS_SAPI_51.msi

    - Program window appears

5. Follow the installation instructions
    - The program will be installed.
6. Close the program window

→ Program installed

Activating the program

1. Go to the following directory: C:\Acapela_Dairyplan

2. Start the program "as administrator": RegSapi5.bat

    - The program is registered in the operating system
3. Start DPView and open the settings

    - The settings dialog will appear
4. Select the "Speech output" tab
5. Activate the speech output function
6. Select language
    - If no speech selection menu exists, repeat the activation.

→ Speech output activated
